> EXPERIENCE

Undergraduate Research Assistant

Lassonde School of Engineering (May 2020 - PRESENT)

- Designing a machine learning model to predict a fraudulent credit card transaction based on skewed large-scale datasets.
- Leveraging pandas, scikit-learn, libsvm in Python to build a binary classifier.

> PROJECTS

Review Lassonde

Flutter, Firebase, Selenium

- Developed a full-stack cross-platform mobile application that allows students to leave reviews about the courses they have taken.
- Successfully developed a scheduled cloud function that web scrapes data of the school website.
- This project introduced me to the world of open-source and taught me async programming, state management, and web scraping.
